BiodeHUB

Biometric Solutions for Business

Advanced identity management for complex business ecosystems

Discover BiodeHUB

BiodeHUB places world-leading biometrics at the heart of your business ecosystem. Our advanced identity management solution biometrically enables a wide range of business systems to protect your people and assets more securely and efficiently.

Why is BiodeHUB so valuable?

The use of biometrics in business is still a relatively new concept. Organisations with a complex business ecosystem are only starting to understand the value of a world-class biometric identity management solution to **improve security, mitigate costly inefficiencies, and optimise profitability.**

How will BiodeHUB help your business?

Trust is good, but biometrics is better.

Your business is a complex ecosystem of operational activities working toward a shared objective. Success demands accurate and secure management of people and assets to ensure your company operates to its maximum potential.

BiodeHUB offers a comprehensive suite of biometric identity management tools and leading third-party integrations for optimal efficiency, accuracy, and security. Our highly customisable solution places the biometrically identified individual at the heart of your essential operational activities, such as access control, RFID-tagged asset management and time & attendance.

The irrefutable nature of biometrically enabled business systems helps solve a range of business problems and gives managers complete **peace of mind.**

Protecting people and assets.

How does BiodeHUB work?

The following infographic demonstrates how embedding biometric identity management into the heart of your business workflows helps solve costly problems and enhances productivity, profitability and security.

People are the heart of your business. Biometrics gives you the power to protect your people and your assets.

A staff member or visitor presents to perform a specific action.

Desired Actions

For example:

A visitor to the business wants to:
· Register their on-site attendance
· Enter/exit a controlled area

A staff member wants to:
· Clock on/off their shift
· Enter/exit a controlled area
· Assign/move a tracked asset
· Take possession of a key

BiodeHUB

Without BiodeHUB

Many critical business activities, such as access control, inventory management, asset tracking and payroll functions, are compromised due to inadequate operational control systems.

Asset theft, stock shrinkage, timesheet fraud, data errors, on-site safety and security are costly problems that negatively affect every business.

Barrier
Have you been Biode?

Biometric Hardware

Biometric Modalities

API Integrations

Embed BiodeHUB into your workflows

BiodeHUB acts as a protective barrier for your critical business systems. By embedding the power of biometric identification into your workflows, you increase security, improve data accuracy, and capture the irrefutable evidence of the time, location and originating person behind every activity.

BiodeHUB increases management control because individuals must be biometrically identified before undertaking any desired action. This helps managers reduce costly problems like asset theft, shrinkage, timesheet fraud, data errors and the administrative cost of managing staff.

Our third-party integrations share valuable information with other solutions within the ecosystem, improving business efficiency.

Security & access control

Key safe management

Time & Attendance

Muster report

Business Ecosystem

Business activities are managed more effectively and securely by placing the biometrically identified individual at the heart of the ecosystem, including:

RFID-tagged asset management

Payroll & roster Integration

Visitor management

Management reporting

Future-proof

When it comes to biometric technology, BiodeHUB is future-proof and proudly technology and brand-agnostic. We offer unparalleled flexibility and peace of mind because we can integrate biometric devices from almost any vendor. Our clients are never locked into any single hardware provider or biometric modality.

Strengthen your business ecosystem with world-leading biometrics.

Valuable Benefits

Without biometric identity management, traditional business systems suffer many limitations. Advanced biometric identity management enhances your business ecosystem and contributes to your competitive advantage in the market.

Access control
Biometric technology significantly improves safety and security controls by eliminating unauthorised staff or visitor access to secure, private, or dangerous areas, including real-time updates of access permissions.

Access rules & authorisations
Accurately manage an individual's complex access rules and authorisations, including anti-passback and zone management. Seamless integration with advanced security and building management solutions, such as Saab's OneView, Honeywell's EBI, Inner Range's Integriti and Gallagher, enhances access control and security management.

Cards, passwords, PINS
Eliminate fallible swipe cards, passwords and PINS that are easily stolen, lost, shared or hacked. Increased security protects against identity fraud, spoof attacks, cyber threats and unlawful access to critical business areas.

Time & attendance
Eliminate time & attendance fraud by capturing irrefutable evidence of the time, location and originating person behind every timesheet entry.

Payroll
Ensure timesheets and payroll data are recorded accurately and staff are compensated correctly. Seamless third-party integration with your preferred payroll solution reduces errors and costly data re-entry.

RFID-tagged assets
Increase accountability and reduce theft by assigning RFID-tagged assets to staff and accurately track the movement of tools, property and equipment throughout your business.

Inventory management
Enable strict and robust access control to inventory areas to reduce shrinkage.

Key management
Securely protect physical keys that are easily lost or stolen and control and maintain complex key rules and authorisations. Comprehensive integration with Morse Watchman's KeyWatcher provides even greater management control.

Data management
Share essential data across relevant third-party information systems, relieving administrative burden, reducing duplication of effort and eliminating costly data entry and consistency errors.

HRM and compliance
Improve compliance outcomes by linking HRM information to biometrically-enabled operational controls, such as forklift and trade licences.

Management reports
Instantly generate accurate management reports for better operational insights and audit trails.

Muster reports
Instantly generate accurate muster reports to improve on-site safety and security for staff and visitors.

Scalability
Efficiently manage high volumes of organisational activity with ultra accuracy.

Is BiodeHUB right for your business?

BiodeHUB will improve and enhance business processes in every organisation that requires secure, accurate and reliable management of its people and assets.
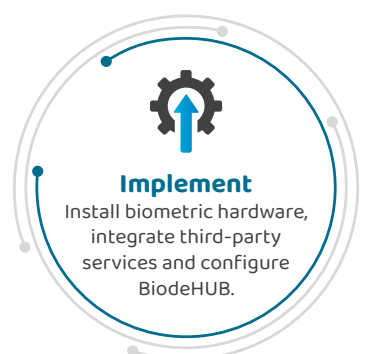

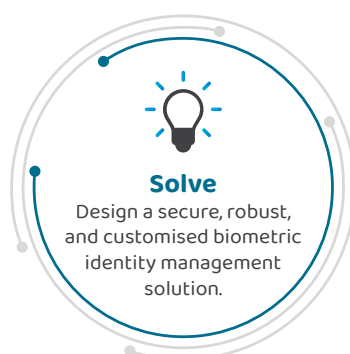

Does your organisation manage:

- Advanced and interrelated systems such as access control, RFID-tagged assets, key safes, payroll and information systems?
- Complex personnel authorisations, rules and permissions?
- Valuable, mobile or hazardous assets?
- Multiple access control points or zones?
- Complex or multiple sites?

Biode's advanced BiodeHUB identity management solution can be deployed in the following complex environments:

- Industrial
- Utilities
- Manufacturing
- Logistics
- Convention Centres
- Aged care
- Research
- Government
- Law Enforcement
- Mining
- Airports
- Warehousing
- Stadiums
- Healthcare
- Banking
- Tech
- Defense
- Highrise Building Management

Our simple 3-step process

Empowering you to manage your business more accurately and securely.

Diagnose
Identify limitations in existing people and asset management systems.

Solve
Design a secure, robust, and customised biometric identity management solution.

Implement
Install biometric hardware, integrate third-party services and configure BiodeHUB.
